

Enjoy the Clean Air

We care about your safety while you are with us. We have added the Air Protection System by Air Rover, Inc. to keep this indoor air clean and safe to breathe.

Increased Air Flow
The quicker the air can be replaced per hour, the safer it is. This system quickly removes contaminants and replenishes the space with fresh, sanitized air as fast as every 23 minutes

True 12-inch HEPA Filtration
Captures 99.97% of 0.3-micron dangerous particles and prevents them from being recirculated in the indoor air

Ultraviolet Germicidal Irradiation (UVGI)
Our Ultraviolet-C Spectrum Lighting (UVC) lighting is 100% safe and kills up to 99.9999% airborne viruses, bacteria, mold, and other pathogens

Negative Air Capability
Where applied, Negative Air Pressure with up to 12 Air Changes per Hour (ACH) provides the medical-grade air quality of a hospital isolation room

Carbon Filtration
Removes harmful gases, chemicals, odors, and other volatile organic compounds (VOCs)

Safety Certified and Effective
The Air Rover Air Protection System is ETL Certified and performs consistent with CDC, OSHA and ASHRAE guidelines
